

Task 7 Summary – Conditional Rendering in React

Summary

In this task, I learned how to display different UI elements based on conditions in React using JavaScript. I explored various conditional rendering techniques such as if/else statements, ternary (? :) operator, and logical AND (&&) operator. I also learned how to return null to render nothing, conditionally assign JSX to variables, and write clean, readable conditional code. This helped me understand how to build dynamic user interfaces that respond to different states and conditions.

Task 8 Summary – Rendering Lists in React

Summary

In this task, I learned how to render multiple components dynamically using JavaScript arrays in React. I practiced using the `map()` method to display lists of data and the `filter()` method to show only specific items based on conditions. I also understood the importance of using unique key props for list items to help React efficiently update and manage the UI. This task improved my understanding of working with dynamic data and rendering collections in React applications.

- **Mario José Molina-Pasquel Henríquez:** chemist known for discovery of Arctic ozone hole

- **Percy Lavon Julian:** chemist known for pioneering cortisone drugs, steroids and birth control pills

- **Creola Katherine Johnson** mathematician known for spaceflight calculations

- **Mario José Molina-Pasquel Henríquez** chemist known for discovery of Arctic ozone hole

Mohammad Abdus Salam physicist known for electromagnetism theory

•

Percy Lavon Julian chemist known for pioneering cortisone drugs, steroids and birth control pills

•

Subrahmanyan Chandrasekhar astrophysicist known for white dwarf star mass calculations

Recipes

Greek Salad

- tomatoes
- cucumber
- onion
- olives
- feta

Hawaiian Pizza

- pizza crust
- pizza sauce
- mozzarella
